

INSTALLATION INSTRUCTIONS: STALL GRID

1
Before installing stall grid make sure that the area is sufficiently dried out!

2
Make sure that the existing area is levelled.

3
In order to make perfect base use 8" of #2 gravel and compact.

4
The area is levelled.

5
Use 4" of $\frac{3}{4}$ " gravel and compact again.

6
Start laying down the grids with the tabs facing the direction of laying process. The grid self-lock by snapping in with the attached tabs.

7
Fill in with pea gravel to ensure drainage in the stalls or use stone dust for turnouts.
