INSTALLATION INSTRUCTIONS: STALL GRID

Before installing stall grid make sure that the area is sufficiently dried out!

Make sure that the existing area is levelled.

In order to make perfect base use 8" of #2 gravel and compact.

The area is levelled.

Use 4" of ¾" gravel and compact again.

Start laying down the grids with the tabs facing the direction of laying process. The grid self-lock by snapping in with the attached tabs.

Fill in with pea gravel to ensure drainage in the stalls or use stone dust for turnouts.
